

Observing and Measuring Parent-Child Interaction— It's Worth It!

Monica Oxford, Ph.D.

**Research Professor Department Of Family And Child
Nursing at the University of Washington,
Executive Director NCAST Programs, and
Interim Director of the Barnard Center for Infant Mental
Health and Development**

Outline

- PCI Overview
- Individual practice application
- Program level application
- mloxford@uw.edu

Parent Child Interaction Scales (PCI)

- Developed by Dr. Kathryn Barnard to assess the early relationship between parents and children as the main predictor of outcomes across development.
- PCI scales are used internationally
- PCI scales are used extensively by clinicians to
 - Guide intervention focus and activities
 - Measure change in dyadic interaction
- 100's of research studies have relied on PCI to
 - Document intervention effects
 - Report program outcomes to funders
 - Predict parent and child outcomes

PCI Internationally

Diverse Reach of PCI

Specific Populations of Interest	Author(s)	Year
Australia	Treyvaud, Rogers, Matthews, & Allen	2010
Bangladesh	Frith, Naved, Ekstrom, Rasmussen, & Frongillo	2009
Aboriginal Canadians	Letourneau, Hungler, & Fisher	2005
Japanese	Hirose, et al.	2007
	Loo, Ohgi, & Howard	2005
	Teramoto, Hirose, & Bakeman	2010
Mexican American or Latinos	Kolobe ^a	2004
	Zahr	2000
	Arevalo, Kolobe, Arnold	2014
	Reifsnider, Shin, Todd, Jeong, Gallagher, Moramarco	2016
South Africa	Bigelow, Littlejohn, Bergman, & McDonald ^a	2010
United States , primarily African American lower income families	CANDEL study	2015
United States (nationally representative sample N > 10,000)	Bronte-Tinkew, Zaslow, Capps, Horowitz, & McNamara	2007
	Fuller, Bein, Bridges, Halfon, Jung, Rabe-Hesketh et al. ^a	2010
	Page, Wilhelm, Gamble, & Card ^a	2010
English	Mischenko, Cheater, & Street	2004
Rural Costa Rica	Dudani, Till, and Joode	2013

Specific Subpopulations

Specific Sub Populations

Specific Characteristics of Interest	Author(s)	Year
Adolescent mothers	Sadler, Swartz, & Ryan-Krause	2003
	Sadler, Swartz, & Ryan-Krause ^a	2007
	Koniak-Griffin, Anderson, Brecht, Verzemnieks, Lesser, & Kim ^a	2001

Skin to Skin Contact & Breast Feeding	Alex, MacLellan-Peters	2013
Twin & Preterm births	Beer, Israel, Johnson, Marlow, Whitelaw, Glazebrook	2013

Program Evaluation

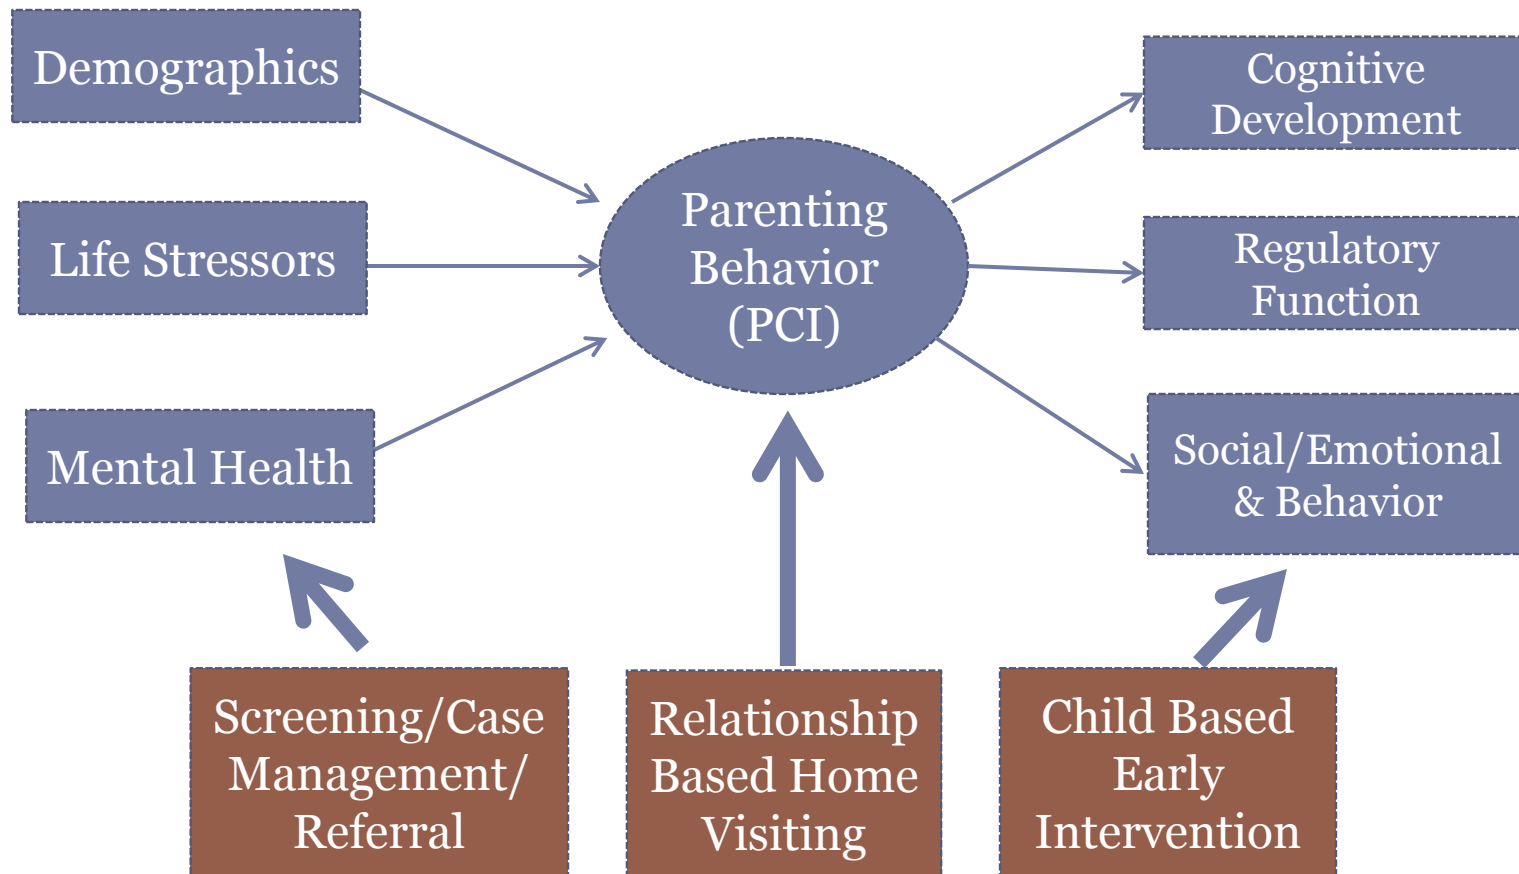

- PCI is used extensively in program evaluations
- Evaluations may use individual subscales:
 - Contingency e.g. Serve and Return items
 - Cognitive Growth Fostering
 - Total scale score
 - Child responsiveness scale score (recently used in Autism research)
- Included in several meta analyses and reviews of programs

Specific Named Program Evaluation	Author(s)	Year
Breast is Best	Shloim, Rudolf, Feltbower	2015
Comprehensive Child Development	Goodson, Layzer, St. Pierre, Bernstein, & Lopez	2000
Communicating and Relating Effectively (CARE)	Horowitz, Murphy, Gregory, Wojcil, Pulcini, Solon	2013
Early Head Start	Horodynski & Gibbons Lugo-Gil & Tamis-LeMonda ^a	2004 2008
Healthy Families Alaska	Duggan, Caldera, Rodriguez, Burrell, Rohde, & Crowne	2007
Healthy Steps Pediatric Care	Caughy, Huang, Miller & Genevro	2004
Infant Sleep Health Program	Jang, Kim	2015
Kangaroo Care	Athanasopoulou, Fox	2014
Keys to Caregiving intervention	Drummond, Letourneau, Neufeld, Stewart, & Weir Jung, Short, Letourneau, & Andrews Letourneau, Drummond, Fleming, Kysela, McDonald, & Stewart Magill-Evans, Harrison, Benzies, Gierl, & Kimak	2008 2007 2001 2007

Improve Parenting Behavior by Improving Parent Circumstances

Improve Parenting Behavior by Working with the Parent Directly

Improve Child Outcomes Because Parents are Better Able to Meet Child's Needs

Papousek, Schieche, and Wurmser (Eds). Disorders of Behavioral and Emotional Regulation in the First Years of Life

Papousek, Schieche, and Wurmser (Eds). Disorders of Behavioral and Emotional Regulation in the First Years of Life

Parent Child Interaction Scales

- **Two scales**
 - Teaching – Ask to teach the child something that they don't know how to do but are ready to learn.
 - ✦ Intended for children up to age 3 years
 - ✦ 1 to 5 minutes
 - Feeding - Ask the parent to feed the child as they normally would.
 - ✦ Intended for children up to age 1 year
 - ✦ 5 to 20 minutes (sometimes more)

PCI Teaching Includes

Serve and Return

Verbal Exchanges

Scaffolding (adjusts the
task developmentally)

Emotional Support

Parental Intrusion

Child's Contributions

Child's Responsiveness

**How do we navigate this task
together?**

Teaching Scale

T-1

NCAST TEACHING SCALE

Birth to Three Years Only

Person Observed: 19 Age: 11 Educ.:

Mother Father
 Other

Child's Name: Ari
Child's Age (in months): 8
Child's Sex: M
Child's Birth Order (circle): 2 3 4 5 or More
Child's State at Beginning of Teaching (write):
Over Sleep Awake Sleep Drowsy
Quiet Alert Active Alert Awake Alert Crying

Where Others Present?
 Yes No
 Gas Car No
If yes, specify: _____

Major Caregiver: Yes No
Name of Task: pulling by string
Length of Time Teaching (minutes): _____
1 or Less 2 4 5 8 or More

Information applies to caregiver
Race/Ethnic Heritage (See back page)
Marital/Partner Status: Married Single

I. SENSITIVITY TO CUES

	YES	NO
1. Caregiver positions child so child is safely supported.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Caregiver positions child so that child can reach and handle teaching materials.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. Caregiver gets the child's attention before beginning the task, at the start of the teaching interaction.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
4. Caregiver gives instruction only when child is attentive (90%).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
5. Caregiver allows child to explore the task material for at least five seconds before giving the first task related instruction.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6. Caregiver positions child so that it is possible for them to have eye-to-eye contact during the majority of the teaching episode (90%).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
7. Caregiver pauses when the child exhibits behaviors during the teaching episode.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
8. Caregiver praises child's successes or partial successes.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
9. Caregiver requires no more than three performances when child is successful at completing the task.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
10. Caregiver changes position of child and/or materials after unsuccessful attempt by the child to do the task.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
11. Caregiver avoids physically forcing the child to complete the task.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
TOTAL YES ANSWERS	6	

II. RESPONSE TO CHILD'S DISTRESS

Yes No (Potential disengagement cues observed)

12. Caregiver stops the teaching episode.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
13. Caregiver makes a positive, sympathetic, or soothing verbalization.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
14. Caregiver changes voice volume to softer or higher pitch. Does not yell.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
15. Caregiver rearranges the child's position and/or task materials.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
16. Caregiver makes soothing non-verbal response, e.g. pat, touch, rock, caress, or kiss.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
17. Caregiver diverts the child's attention by playing games, introducing a new toy.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
18. Caregiver avoids making negative comments to the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
19. Caregiver avoids yelling at the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
20. Caregiver avoids using abrupt movements or rough handling.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
21. Caregiver avoids slapping, hitting, or spanking.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
22. Caregiver avoids making negative comments to home visitor about the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
TOTAL YES ANSWERS	6	

III. SOCIAL-EMOTIONAL GROWTH FOSTERING

23. Caregiver's body posture is relaxed during the teaching episode (90%).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
24. Caregiver positions self face-to-face with the child during the teaching interaction (90%).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
25. Caregiver laughs or smiles at child during the teaching interaction.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
26. Caregiver gently pats, caresses, strokes, hugs, or kisses child during episode.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
TOTAL YES ANSWERS	10	

IV. COGNITIVE GROWTH FOSTERING

27. Caregiver smiles or touches child within five seconds after the child smiles or vocalizes.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
28. Caregiver praises child's efforts or behaviors broadly (in general) at least once during the episode.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
29. Caregiver makes cheerleading type statements to the child during the teaching interaction.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
30. Caregiver avoids vocalizing to the child at the same time the child is vocalizing.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
31. Caregiver avoids making general negative or uncomplimentary remarks about the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
32. Caregiver avoids yelling at the child during the episode.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
33. Caregiver avoids making critical or negative comments about the child's task performance.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
TOTAL YES ANSWERS	7	
34. Caregiver provides an immediate environment which is free from distractions from animate sources (siblings, pets, other people, TV).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
35. Caregiver focuses attention and child's attention on the task during most of the teaching (90%).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
36. After caregiver gives instructions, at least five seconds is allowed for the child to attempt the task before caregiver intervenes again.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
37. Caregiver allows non-task manipulation of the task materials after the original presentation.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
38. Caregiver describes a quality of the task materials to the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
39. Caregiver uses at least two different sentences or phrases to describe the task to the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
40. Caregiver uses explanatory verbal style more than imperative style in teaching the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
41. Caregiver's directions are stated in clear, unambiguous language (e.g. ambiguous = "look!"; unambiguous = "stack the blocks").	<input checked="" type="checkbox"/>	<input type="checkbox"/>
42. Caregiver uses both verbal description and modeling simultaneously in teaching any part of the task.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
43. Caregiver encourages and/or allows the child to perform the task at least once before introducing in the use of the task materials.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
44. Caregiver verbally praises child after child has performed better or more successfully than the last attempt.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
45. Caregiver smiles and/or roars at the child after child performs better or more successfully than the last attempt.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
46. Caregiver responds to the child's vocalizations with a verbal response.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
47. Caregiver uses both verbal and non-verbal instruction in teaching the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
48. Caregiver uses the teaching tool at least once.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
49. Caregiver signals completion of task to child verbally or nonverbally.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
50. Caregiver spends no more than five minutes and not less than one minute in teaching the child the task.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
TOTAL YES ANSWERS	10	

T-1

V. CLARITY OF CUES

	YES	NO
51. Child is in the quiet alert state when task is first presented.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
52. Child widens eyes and/or shows postural attention to task situation.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
53. Child changes laterally or amount of motor activity when task material is presented.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
54. Child's movements are clearly directed toward the task or task material or away from the task material (not diffuse).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
55. Child makes clearly recognizable arm movements during the teaching episode (reaching, reaching, waving, pounding, pointing, pushing away).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
56. Child vocalizes while looking at the task materials.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
57. Child smiles or laughs during the episode.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
58. Child glistens or frowns during the teaching episode.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
59. Child displays potent disengagement cues during the teaching interaction.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
60. Child displays subtle disengagement cues during the teaching interaction.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
TOTAL YES ANSWERS	7	

VI. RESPONSIVENESS TO CAREGIVER

61. Child gazes at caregiver's face or task material after the caregiver has shown verbal or non-verbal alerting behavior.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
62. Child attempts to engage caregiver in eye-to-eye contact.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
63. The child looks at the caregiver's face or eyes when caregiver attempts to establish eye-to-eye contact.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
64. Child vocalizes or babbles within five seconds after caregiver's verbalization.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
65. Child vocalizes or babbles within five seconds after caregiver's gesturing, touching, or changing his/her facial expression.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
66. Child smiles at caregiver within five seconds after caregiver's verbalization.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
67. Child smiles at caregiver within five seconds after caregiver's gesture, touch, or facial expression changes.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
68. When caregiver moves closer than eight inches from the child's face, the child shows some subtle and/or potent disengagement cues.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
69. Child shows subtle and/or potent disengagement cues within five seconds after caregiver changes facial expression or body movement.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
70. Child shows subtle and/or potent disengagement cues within five seconds after caregiver's verbalization.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
71. Child shows potent and/or subtle disengagement cues when caregiver attempts to remove physically in the child's use of the task materials.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
72. Child physically resists or responds aggressively when caregiver attempts to remove physically in the child's use of the task materials.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
73. The child stops displaying potent disengagement cues within 10 seconds after caregiver's soothing attempts.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

VII. SENSITIVITY TO CUES

Enter the total yes answers from each subscale and compare it with the possible score:

	SUBSCALE Items	CONTINGENCY Items		
	Possible	Actual	Possible	Actual
SENSITIVITY TO CUES	11	6	5	3
RESPONSE TO DISTRESS	11	6	6	1
SOCIAL-EMOTIONAL GROWTH FOSTERING	11	7	3	1
COGNITIVE GROWTH FOSTERING	17	10	6	1
CAREGIVER TOTAL	50	29	20	6
CLARITY OF CUES	10	7	0	-
RESPONSIVENESS TO CAREGIVER	13	5	12	5
INFANT TOTAL	23	12	12	5
CAREGIVER/INFANT TOTAL	73	41	32	11

Check the Potent Disengagement Cues (PDC's) observed during the teaching interaction (excluding PDC's that terminate the teaching or occur after the caregiver has terminated the teaching).

<input type="checkbox"/> Back arching	<input type="checkbox"/> Picked sn
<input type="checkbox"/> Choking	<input type="checkbox"/> Pulling away
<input type="checkbox"/> Coughing	<input type="checkbox"/> Pushing away
<input type="checkbox"/> Crawling away	<input type="checkbox"/> Splaying "no"
<input type="checkbox"/> Dry face	<input type="checkbox"/> Spitting
<input type="checkbox"/> Crying	<input type="checkbox"/> Spitting up
<input checked="" type="checkbox"/> Fussing	<input checked="" type="checkbox"/> Try sound
<input type="checkbox"/> Hair stand	<input type="checkbox"/> Yawning
<input type="checkbox"/> Latent head shake	<input type="checkbox"/> Winking Away
<input type="checkbox"/> Maximal lateral gaze aversion	<input type="checkbox"/> Withing
<input checked="" type="checkbox"/> Overhead beating movements	<input type="checkbox"/> Withdraw from alert to sleep state

Place a checkmark next to the caregiver's racial identity.

<input type="checkbox"/> American Indian or Alaska Native	<input checked="" type="checkbox"/> White
<input type="checkbox"/> Native Hawaiian or Other Pacific Islander	<input type="checkbox"/> Multiracial
<input type="checkbox"/> Black or African American	<input type="checkbox"/> Other (please specify)
<input type="checkbox"/> Asian	

Hispanic, Latino, or other Spanish origin?
 No Yes (please specify)

Specific group identity: _____

Clinical Notes:

Teaching Scale

- Teaching Scale is unique because it introduces stress:

- Adult agenda

- ✦ Developmentally appropriate
- ✦ Child's response to adult
- ✦ Verbal assistance
- ✦ Joyful, enhance the child's sense of self as competent
- ✦ Does the parent build on the serve-and-return possibilities?

- Can we navigate this task together?
- Am I able to respond to you in developmentally appropriate ways?

Co-Regulation of a Teaching Task

Findings with PCI Teaching

- **Teaching scale longitudinally predicts**
 - Language (expressive and receptive) outcomes
 - Cognitive outcomes (IQ)
 - Behavior and emotional behavior problems in children
 - Secure attachment
 - Infant task persistence
 - Positive feeding behaviors
 - Regulatory capacity of infant (cortisol, behavioral regulation)
- **Response to Distress Scale (RTD)- 10 items**
 - Low response to distress predicts punishment (1,2, 3 yrs)
 - Low RTD at 3 months of age predicts disorganized attachment
 - Observer rated child regulated behavior during toddler years

PCI Feeding Scale

Serve and Return

Pacing

Social Engagement

Verbal Exchanges

Emotional Support

Intrusive Control

Child's Contributions

Child's Responsiveness

**How do we navigate this routine
interaction together?**

Feeding Scale

- **Feeding scale capitalizes on a routine interaction:**

- It happens at least 2000 times in the first year of life
- Unique opportunity to observe the natural state of serve-and-return
- Can be a source of tension or stress for the parent
- Navigation of increasing autonomy
- Parents often ask/worry about feeding –provides an opening

- How do we navigate this routine interaction together?
- Is feeding a source of tension or joy and pleasure?

Co-Regulation of a Feeding Interaction

Findings with PCI Teaching

- **Feeding Scale- PCI - Predicts**
 - Language outcomes
 - Cognitive outcomes
 - Breast feeding longevity
 - Positive feeding behaviors of child
 - Maternal feeding behavior: low sensitivity and weight gain and pressure to feed
- **Feeding Scale- PCI - Unique Contributions**
 - Preterm or low birth weight dyads
 - Nutrition and weight
 - Breast feeding longevity
 - Skin-to-skin contact
 - Elderly patients in nursing care
 - Feeding under medical or birth complications (orofacial clefts)

Application in Intervention Practice

**LINKING THE PCI SCALE TO THE NEEDS OF
THE DYAD**

Use the scale to identify strengths and challenges

*Comment positively to parents on their strengths.

*Gently introduce games and activities to address challenges.

Linking our practice to PCI

14. Caregiver changes voice volume to softer or higher pitch. Does not yell.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
15. Caregiver rearranges the child's position and/or task materials.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
16. Caregiver makes soothing non-verbal response, e.g. pat, touch, rock, caress, or kiss.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
17. Caregiver diverts the child's attention by playing games, introducing a new toy.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
18. Caregiver avoids making negative comments to the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
19. Caregiver avoids yelling at the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
20. Caregiver avoids using abrupt movements or rough handling.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
21. Caregiver avoids slapping, hitting, or spanking.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
22. Caregiver avoids making negative comments to home visitor about the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
TOTAL YES ANSWERS	6	

III. SOCIAL-EMOTIONAL GROWTH FOSTERING

	YES	NO
23. Caregiver's body posture is relaxed during the teaching episode (92%).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
24. Caregiver positions self face-to-face with the child during the teaching interaction (92%).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
25. Caregiver laughs or smiles at child during the teaching interaction.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
26. Caregiver gently pats, caresses, strokes, hugs, or kisses child during episode.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
TOTAL YES ANSWERS	10	

IV. COGNITIVE GROWTH FOSTERING

	YES	NO
27. Caregiver smiles or touches child within five seconds after the child smiles or vocalizes.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
28. Caregiver praises child's efforts or behaviors broadly (in general) at least once during the episode.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
29. Caregiver makes cheerleading type statements to the child during the teaching interaction.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
30. Caregiver avoids vocalizing to the child at the same time the child is vocalizing.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
31. Caregiver avoids making general negative or uncomplimentary remarks about the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
32. Caregiver avoids yelling at the child during the episode.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
33. Caregiver avoids making critical or negative comments about the child's task performance.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
TOTAL YES ANSWERS	7	
34. Caregiver provides an immediate environment which is free from distractions from animate sources (siblings, pets, other people, TV).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
35. Caregiver focuses attention and child's attention on the task during most of the teaching (90%).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
36. After caregiver gives instructions, at least five seconds is allowed for the child to attempt the task before caregiver intervenes again.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
37. Caregiver allows non-task manipulation of the task materials after the original presentation.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
38. Caregiver describes a quality of the task materials to the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
39. Caregiver uses at least two different sentences or phrases to describe the task to the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
40. Caregiver uses explanatory verbal style more than imperative style in teaching the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
41. Caregiver's directions are stated in clear, unambiguous language (e.g. ambiguous = "look"; unambiguous = "stack the blocks").	<input checked="" type="checkbox"/>	<input type="checkbox"/>
42. Caregiver uses both verbal description and modeling simultaneously in teaching any part of the task.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
43. Caregiver encourages and/or allows the child to perform the task at least once before introducing the use of the task materials.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
44. Caregiver verbally praises child after child has performed better or more successfully than the last attempt.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
45. Caregiver smiles and/or roars at the child after child performs better or more successfully than the last attempt.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
46. Caregiver responds to the child's vocalizations with a verbal response.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
47. Caregiver uses both verbal and non-verbal instruction in teaching the child.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
48. Caregiver uses the teaching tool at least once.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
49. Caregiver signals completion of task to child verbally or nonverbally.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
50. Caregiver spends no more than five minutes and not less than one minute in teaching the child the task.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
TOTAL YES ANSWERS	10	

Caregiver Serve & Return 6 out of 20

V. CLARITY OF CUES

	YES	NO
51. Child is in the quiet alert state when task is first presented.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
52. Child widens eyes and/or shows postural attention to task situation.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
53. Child changes laterally or amount of motor activity when task material is presented.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
54. Child's movements are clearly directed toward the task or task material or away from the task material (not diffuse).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
55. Child makes clearly recognizable arm movements during the teaching episode (slapping, reaching, waving, pounding, pointing, pushing away).	<input checked="" type="checkbox"/>	<input type="checkbox"/>
56. Child vocalizes while looking at the task materials.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
57. Child smiles or laughs during the episode.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
58. Child grimaces or frowns during the teaching episode.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
59. Child displays potent disengagement cues during the teaching interaction.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
60. Child displays subtle disengagement cues during the teaching interaction.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
TOTAL YES ANSWERS	7	

VI. RESPONSIVENESS TO CAREGIVER

	YES	NO
61. Child gazes at caregiver's face or task materials after the caregiver has shown verbal or non-verbal directing behavior.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
62. Child attempts to engage caregiver in eye-to-eye contact.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
63. The child looks at the caregiver's face or eyes when caregiver attempts to establish eye-to-eye contact.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
64. Child vocalizes or babbles within five seconds after caregiver's verbalization.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
65. Child vocalizes or babbles within five seconds after caregiver's gesturing, touching, or changing their facial expression.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
66. Child smiles at caregiver within five seconds after caregiver's verbalization.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
67. Child smiles at caregiver within five seconds after caregiver's gesture, touch, or facial expression changes.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
68. When caregiver moves closer than eight inches from the child's face, the child shows some subtle or overt disengagement cues.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
69. Child shows subtle or overt disengagement cues within five seconds after caregiver changes facial expression or body movement.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
70. Child shows subtle or overt disengagement cues within five seconds after caregiver's verbalization.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
71. Child shows potent or overt disengagement cues when caregiver attempts to remove physically in the child's use of the task materials.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
72. Child physically resists or responds aggressively when caregiver attempts to remove physically in child's use of the task materials.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
73. The child stops displaying potent disengagement cues within 10 seconds after caregiver's soothing attempts.	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Feeding Scale

Feeding

Feeding Scale Sensitivity to Cues

Mothers ≥ 22 with children 4 to 12

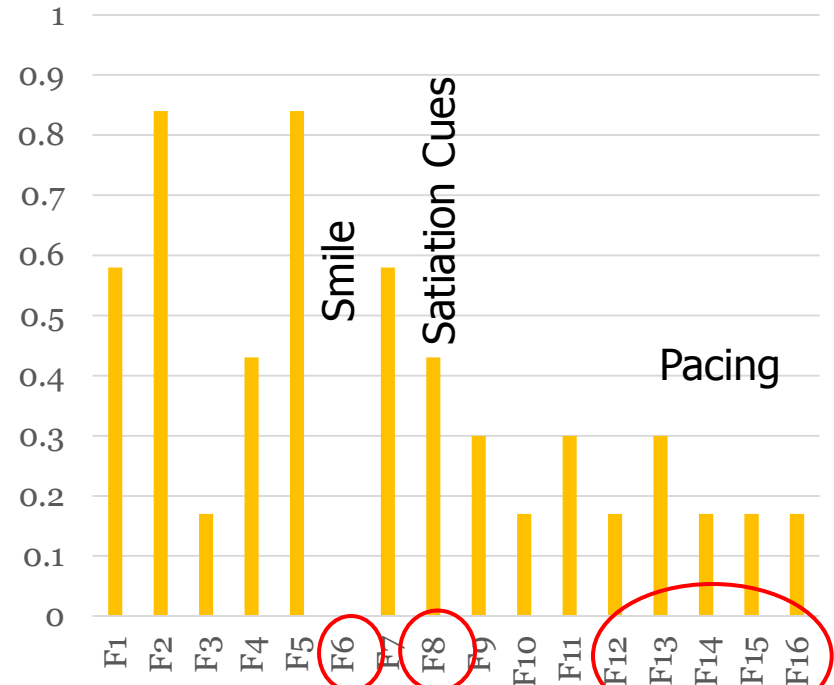

More Typical Group Means

More Typical

Less Typical Group Means

Less Typical

Assessment to Practice

Intervention Goals

- Explore the pressure to feed
- Explore cultural beliefs around feeding
- Mom to gain an understanding baby's non-verbal cues
- Learn difference between hunger and satiation

Potential Activities

- Baby Cue Cards & video
- PIPE “*A Complete Feeding Cycle*” with a focus on “*Let the Child Set the Pace*” & Unit 3 “*Feeding Cues*”
- Keys to Caregiving: Feeding Handout

Discussing and Introducing the Results

Working with Mom

Careful observation enhances intervention

- Ask how they felt about the activity and validate it— whatever it is (it is awkward.....uncomfortable....but)
- Show appreciation for taking the risk
- Then remind them of what went well, what strengths you noted
- Then comfortably introduce some activities....
- No need to say “you scored low” or “you need to work on” you can say...I thought today we would focus on this x, y, z....

Exercise

- Adolescent mother named Olive, new to the area
- Review her teaching PCI
 - Consider where to focus intervention
 - Discuss how you might talk about her strengths
 - What activities would you use to address her challenges

Case load of 4 lowest scoring dyads

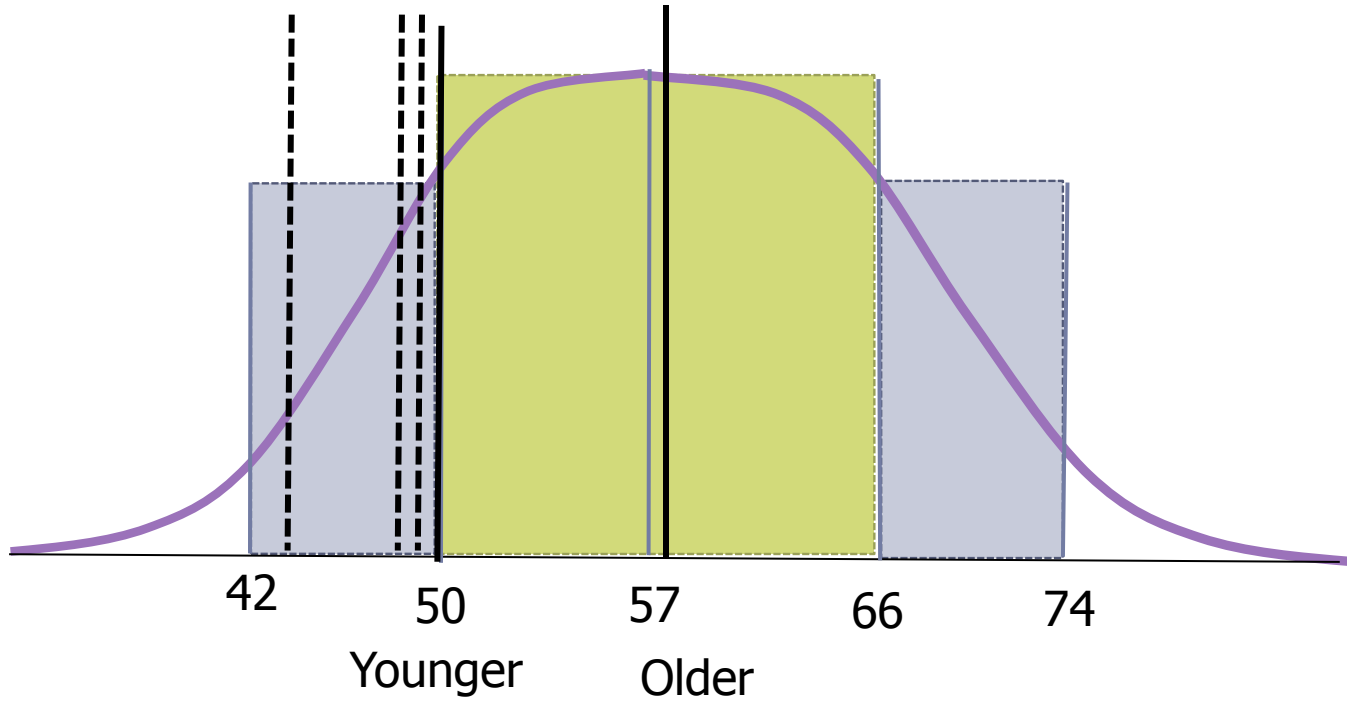

- Investigate the lowest scoring four caregivers
 - All 4 mothers score nearly one standard deviation below the mean
 - All would benefit from focused parent-child, serve-return intervention strategies
 - What each individual receives will be different

Client	Younger

Helen	49

Helen and Jennifer

Olive

Specific Population Teaching Total Distribution

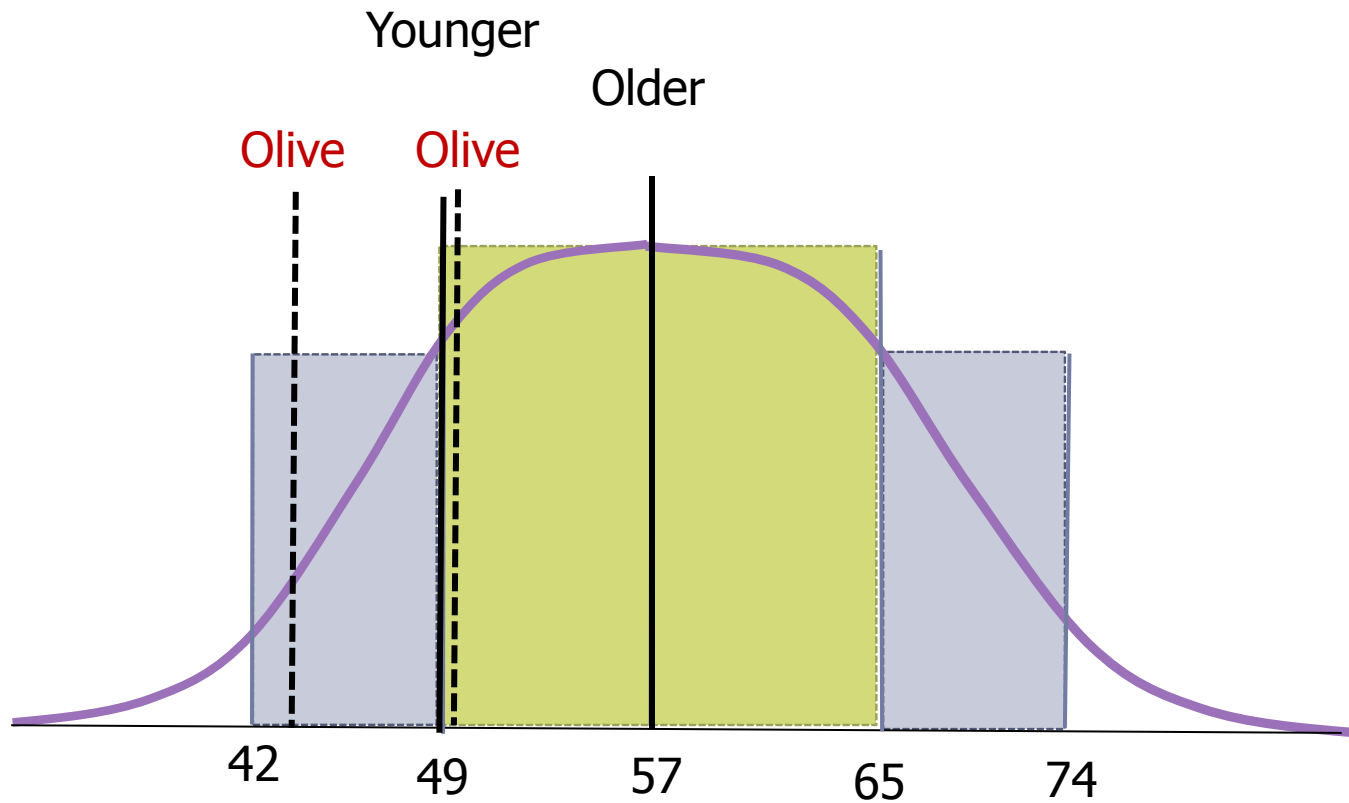

Design the Intervention for Olive and Baby

- **Intervention Goals:**

- **Intervention Activities:**

Specific Population Teaching Total Distribution

Program Level Use

MEANING MAKING

Potential Programmatic Uses

- **Understanding where your community is on PCI**
 - Compare means to other regions/units or samples in Canada
 - Understand what predicts low and high parenting capacity and child response to caregiver from HBHC screen.
- **Understand different subgroups within your community by a known risk factor**
 - Older moms compared to younger moms
 - Mothers with and without substance use issues
- **Use PCI to assess needs and implement program changes**
 - Increase home visiting services for at-risk parents
 - Fund a play group with the intent of increasing vocalizations among adolescent parents, measure pre-post PCI

HBHC Screen

- Pregnancy and birth (Apgar, weight, maternal smoking....)
- Family's demo (age, ed, OHIP,....)
- Parenting stress (care for child, financial concern, history of anxiety/depression, support, disability, relationship strain, CPS, baby difficult to manage).
- Infant child development risk

Understanding Subgroups and Communities

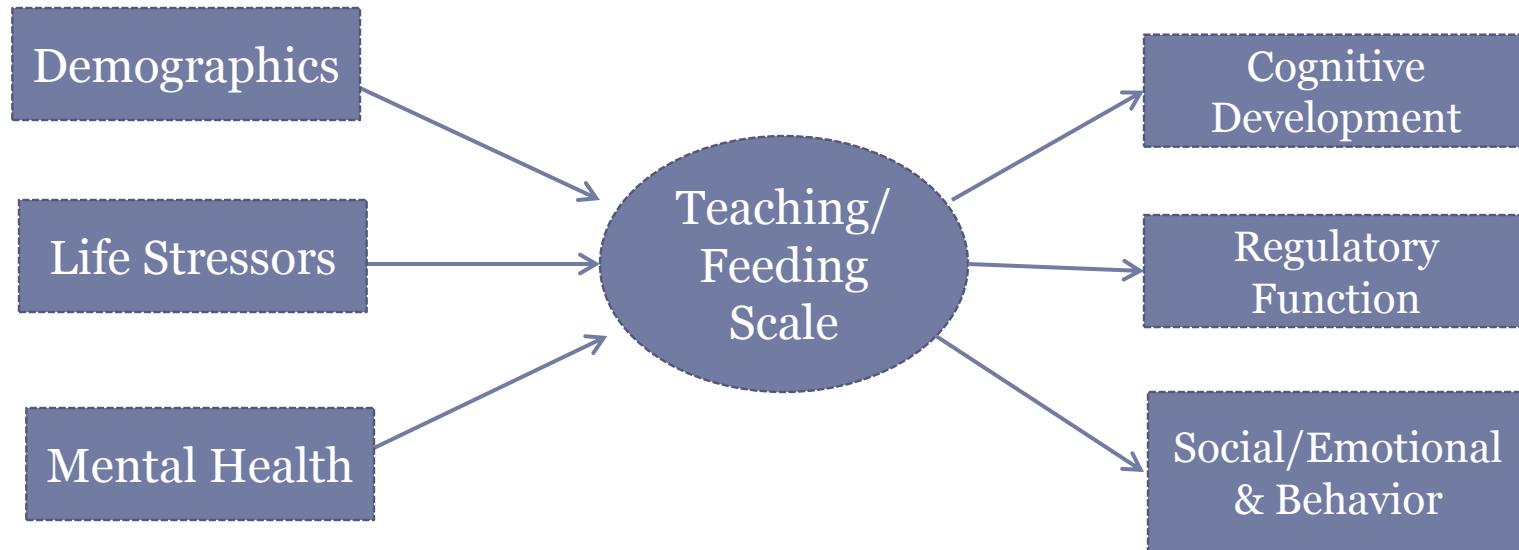

Subgroup/Community Differences on PCI

- Parents who are heavy substance users or are in treatment for substance use
- Parents with lower levels of education
- Adolescent parents
- Low birth weight or parents of children with medical needs
- Parents who are involved with child welfare
- Parents with mental illness- depression in specific
- Parents considered at risk because of multiple risk factors

What predicts parenting in Group A and Group B

NCAST Data Base Teaching Total Distribution

Setting up your data

- Enter subscale and total scale scores into excel
- Add variables of interest (group membership, risk status, age of baby)

Understanding Adolescent Parents: Teaching Total Score

- Identify your population of interest.

Young Mothers

- Big difference between younger and older mothers.
- Teaching older moms= 58 and 52 for adolescent moms.

Child Response	8	7
Total	61	50

- We notice that the cognitive scale has the greatest discrepancy for the group
 - Dig deeper and look at individual cases
 - Implement program wide focus on increasing cognitive growth fostering activities for all young mothers
 - Use to get funding for programs for certain populations

Cognitive Growth Fostering by Mother Age

Teaching Scale Cognitive Growth Fostering

Mothers ≤ 22 with children 4 to 14

Intervention Planning

Intervention Goals

- Increase awareness about the importance of talking to your baby
- Responding to baby's non verbal cues
- Explore comfort with talking to baby

Activities Planned

- PIPE Listen: *Learning Language or Reading to Baby*
- Use any Teaching Loop Diagram
- <https://www.youtube.com/watch?v=WdLKpxktJB4>
- https://www.youtube.com/watch?v=ZJBnUNp4_og

Identify Individuals at Risk

- Investigate the lowest scoring four caregivers
 - All 4 mothers score nearly one standard deviation below the mean
 - All would benefit from focused parent-child, serve-return intervention strategies
 - What each individual receives will be different

Programmatic Outcomes

**COMPARE PRE-TEST TO POST-TEST TO
MEASURE THE EFFECT OF SERVICE
PROGRAM OUTCOMES**

Programmatic Outcomes:

- All families coming into service during a specific time frame.
- All families with a specific risk factor
- All families with children in different age ranges (0-3mo; 3-6mo; 6-12mo)
- Program outcomes 2 months, 3 months, 6 months.

Needs Assessment at Community Level

**IDENTIFY PROGRAM NEEDS IN DIFFERENT
COMMUNITIES/GROUPS/POPULATIONS**

Understanding Specific Communities/Regions

PCI Total, Parent Total, & Child Total

Program Choices

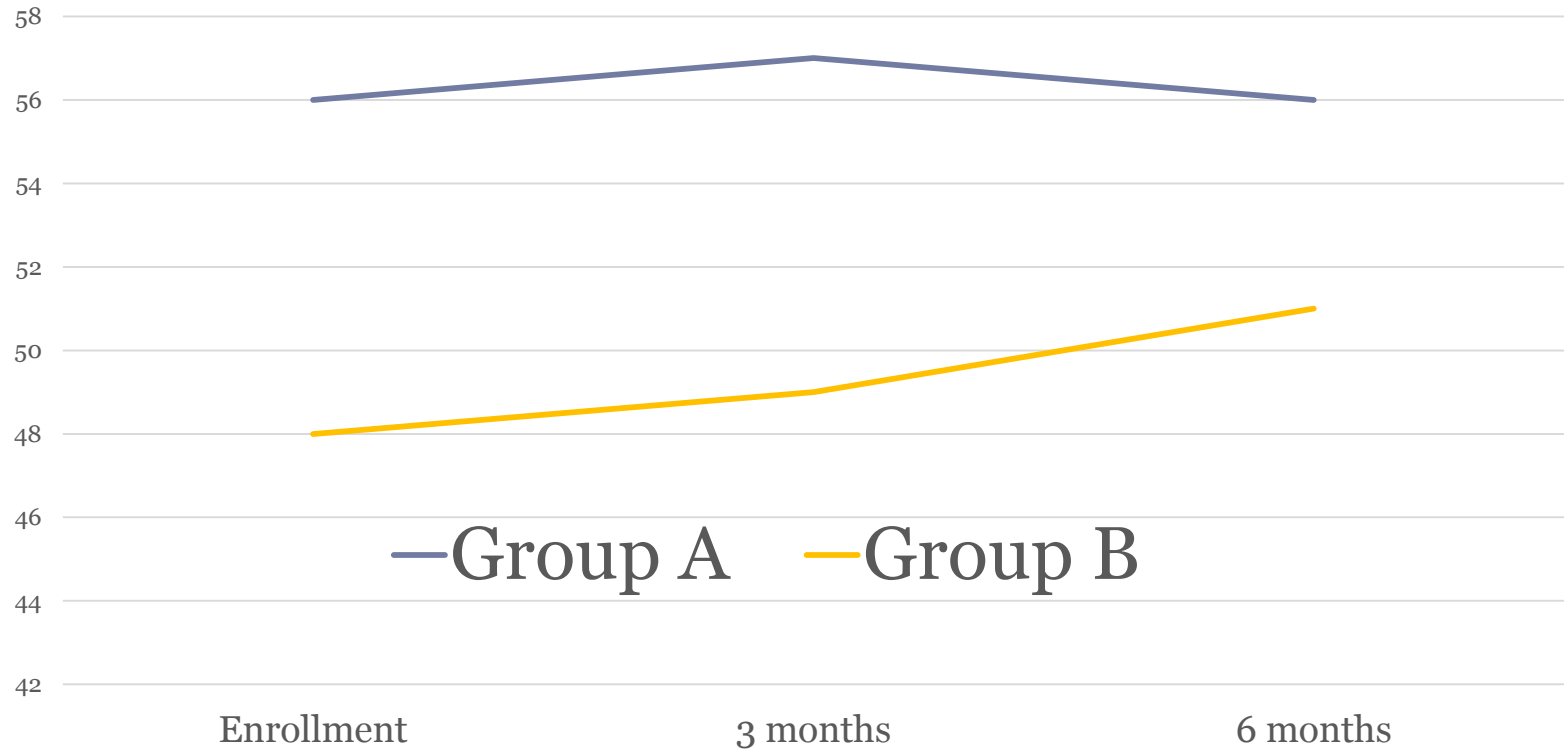

- Increase access our outreach for home visiting for community C then take a post-test and see if the overall average has improved.
- Provide play support groups in community 3 with aims on improving parental sensitivity during play.
- Dig a little deeper and see if there is a sub group of particular concern (perhaps Community C has more _____ parents).

Comparing Groups within Communities

	Community A N= 50 Mean (SD)	Community B N = 38 Mean (SD)
Sensitivity to Cues	9 (1.5)	7.5
Response to Distress	10 (1)	8
Social Emotional Growth Fostering	9 (1.5)	8
Cognitive Growth Fostering	13 (3)	10
Child Cues	8 (1.5)	8
Child Responsiveness	7.5 (3)	6.5
Total Parent	41 (7)	33.5
Total Child	15.5 (4)	14.5
Total Mother Serve and Return	17 (3)	14
Total Child Serve and Return	3 (1.5)	3
Grand Total	56.5 (8)	48
