The MNCHP Bulletin is an electronic bulletin that highlights current trends, new resources and initiatives, upcoming events and more in the preconception, prenatal and early childhood education and development fields. Our primary focus is the province of Ontario, Canada but the bulletin also includes news and resources from around the world. Wherever possible, we include resources that are available for free.

Another Huge Win for First Nations Kids

September 6, 2019, marked another win for First Nations children and their families as the Canadian Human Right Tribunal (CHRT) found that Canada willfully and recklessly discriminated against First Nations children. In this ruling, the CHRT ordered Canada to pay the maximum amount allowable under the Canadian Human Rights Act (CHRA) to compensate First Nations children, youth and families who have been harmed by the child welfare system or were denied or delayed receipt of services due to Canada’s discriminatory implementation of Jordan’s Principle.

Learn more, read the entire ruling, and see the discussion.

Telehealth Ontario expanded to Include Smoking Cessation Services

As of October 1, 2019, Ontarians will have easy access to registered nurses and smoking cessation support through Telehealth Ontario, in combination with other services and health information already offered, including professional medical advice, nutrition counselling and referrals to mental health and addictions support. By transitioning these resources to Telehealth Ontario, the government expects to improve and expand frontline services and supports available to Ontarians, while saving $750,000 annually.

Opinion: Cancelling the Transition Child Benefit in Ontario is Bad Policy

A little over a year ago, the Government of Ontario announced that it had set itself an “accelerated 100 day deadline to develop and announce a sustainable Social Assistance program.” One of the few decisions that have been announced is the cancellation of the Transition Child Benefit (TCB). According to Maytree, this decision will have devastating long-term consequences for many families in Ontario and undermine the government’s own stated goal of transforming social assistance.

Coming Into force of an Act Respecting First Nations, Inuit and Métis Children, Youth and Families

The Act respecting First Nations, Inuit and Métis children, youth and families will come into force in its entirety on January 1, 2020. This legislation was co-developed with Indigenous partners with the goal of keeping Indigenous children and youth connected to their families, communities, and culture. Its coming into force affirms the inherent right of First Nation, Inuit and Métis communities to move forward with legislation to exercise jurisdiction over child and family services at a pace that they choose.

Canada Cares: Canadians Increasingly Support Development Aid and Global Health Funding but Question Progress on Fighting Global Poverty

Public opinion research released by the Canadian Partnership for Women and Children’s Health (CanWaCH) indicates that Canadians increasingly support federal government investment in development aid and global health. The poll, conducted for CanWaCH by Nanos Research, also found that some Canadians question progress on the fight against global poverty.

Ontario Expanding Home and Community Care Services

Ontario is making major investments to expand home and community care to help end hallway health care
and build more capacity in communities across the province by investing an additional $155 million this year to expand home and community care services. As a part of this investment, the government is providing $45 million for targeted innovative integrated care models in high-need areas.

II. Recent Reports & Research

Healthy Mothers, Healthy Babies: Taking Stock of Maternal Health

Much progress has been made in ending preventable maternal deaths in the past two decades: The number of women and girls who die each year due to issues related to pregnancy and childbirth has dropped considerably, from 532,000 in 1990 to 303,000 in 2015, a 43 per cent decrease. Still, more than 800 women die every day from pregnancy-related complications and many more mothers experience injuries or other debilitating outcomes.

Dysphoric Milk Ejection Reflex: A Descriptive Study

Dysphoric milk ejection reflex (D-MER) is emerging as a recognized phenomenon to describe an abrupt dysphoria, or undesirable feeling that occurs with the milk ejection reflex (MER) and then goes away after a few minutes. The purpose of this study was to determine the prevalence of D-MER among breastfeeding women and to describe the experience of symptoms associated with D-MER in women presenting for their 6- to 8-week postpartum visit. A prevalence rate of 9.1% was found. The respondents described similarities in their experiences with D-MER, to include feelings coming on suddenly and lasting for <5 minutes. The respondents described feeling anxious, sad, irritable, panicky, agitated, oversensitive, and tearful most often. The findings support that the experience of D-MER is different from that of postpartum depression.

Towards Justice: Tackling Indigenous Child Poverty in Canada

Towards Justice: Tackling Indigenous Child Poverty in Canada, released in partnership with the Assembly of First Nations (AFN) and the Canadian Centre for Policy Alternatives (CCPA), tracks child poverty rates using Census 2006, the 2011 National Household Survey and Census 2016. “Child poverty rates on First Nations reserves are deplorably high for a country as rich as Canada,” says co-author David Macdonald, senior economist with the CCPA. “What’s worse is that is that these rates haven’t shown any improvement since 2005.”

**Systematic Review of Factors Influencing Non-Medically Indicated Formula Supplementation of Newborns in the Hospital Setting**

To examine maternal and newborn factors that influence non-medically indicated (NMI) formula supplementation of newborns in the hospital setting, a systematic review of peer-reviewed articles published in English between January 1, 2000, and September 30, 2017 was conducted. Synthesis indicated that maternal ethnicity, educational level, and income influence the decision to provide NMI formula supplementation to newborns. First-time mothers and those with cesarean birth, no previous breastfeeding experience, female newborns, and large-for-gestational-age newborns were at greater risk for NMI formula supplementation. Neonates born at night are more likely to receive NMI formula supplementation, and NMI formula supplementation increases during the night hours and during the first 24 hours after birth.

**Breastfeeding Status and Duration and Infections, Hospitalizations for Infections, and Antibiotic Use in the First Two Years of Life in the ELFE Cohort**

To examine the association between breastfeeding and infections in the first 2 years of life, in a high-income country with relatively short breastfeeding duration, data from 10,349 young children from a French birth cohort were prospectively collected up to 2 years, with never-breastfed infants as reference group. Any breastfeeding for <3 months was associated with higher risks of hospitalizations from gastrointestinal infections or fever. Predominant breastfeeding for <1 month was associated with higher risk of a single
hospital admission while predominant breastfeeding for ≥3 months was associated with a lower risk of long duration (≥4 nights) of hospitalization. Ever breastfeeding was associated with lower risk of antibiotic use.

Chronic Harsh Parenting and Anxiety Associations with Fear Circuitry Function in Healthy Adolescents: A Preliminary Study

Fear circuitry functioning in healthy youths with histories of high (HH) or low (LH) chronic harsh parenting and high (HA) or low (LA) anxiety levels was investigated in 84 youths performing an fMRI fear conditioning task. HH displayed decreased selective medial temporal lobe deactivations, less amygdala-insula connectivity. Further analysis suggested that a history of harsh parenting is linked with unique neural and behavioral anxious manifestations, which are different from anxiety manifestations in a context of low adversity.

Where We Stand - The Canadian Index of Child and Youth Well-Being

- Only 55% of children in Canada report a high level of life satisfaction
- 27% report feeling sad or hopeless for long periods of time
- 1 in 3 reporting weekly symptoms linked to mental distress, including headaches and stomach aches
- 1 in 4 young people sometimes goes to bed or school hungry
- More than a third of young people experience discrimination
- 27% are often bullied and 28% get in fights
- 17% feel time pressure and a quarter say they are overwhelmed with school work

Ketogenic Diet-Induced Severe Ketoacidosis in a Lactating Woman: A Case Report and Review of the Literature

Although ketogenic diet is safe in non-pregnant individuals, its safety in lactating mothers is unknown. This is a report of lactation ketoacidosis in human, where glycogen stores depletion forced the body into using gluconeogenesis as energy substrate for breast milk production. This is the first case report of life-threatening lactation ketoacidosis in setting of ketogenic diet with adequate number of calories, above 2000 kcal/day. This index case may provide caution in lactating mothers on/or considering ketogenic diet.

Ontario to Seek Input on Improving the Child Welfare System

Ontario’s Associate Minister of Children and Women’s Issues announced the launch of an engagement with youth, families, caregivers, frontline workers and child welfare sector leaders to strengthen the child welfare system for children and youth. Provide feedback on your experiences and ideas through an online survey.

Canadian Malnutrition Awareness Week™ 2019: The Hidden Impact of Malnutrition
The 5th annual Canadian Malnutrition Awareness Week™ (CMAW) is taking place from September 23 to 27, 2019. This year’s CMAW will focus on Malnutrition in the Community and includes important information to support patients transitioning from hospital to home. It aims to raise awareness among patients, families and health care providers on the importance of the vital role of nutrition to recovery. The campaign is focusing on older adults in particular, given they are typically more nutritionally vulnerable.

### IV. Upcoming Events

**Webinar: 10 Tips to be a Social Media Advocacy Guru**

Join CanWaCh on September 25, 2019 at 8:30pm as they explore how social media (Facebook, Twitter, Instagram and LinkedIn) can be part of your advocacy and raising awareness efforts around the issues that matter to you. You will get 10 tangible tips on how to be an efficient advocate on social media with an array of additional sources. This webinar will be in English but questions in French are welcome.
